

...means that they even have an explosive risk character that may harm the user.

In standard EN 61010-031 there are four different test categories, abbreviated by category CAT followed by a number from I to IV is stated in our catalog. The test category of the products.

As a general rule, the higher the CAT rating, the higher the safety requirements for the product. One exception is CAT I, page 10.

### Measurement Category CAT I

Applies to test objects that are not connected to the mains. Here, either all or only quite specific ones which are not, however, specified in the
